Testing and Validation Plan

Project: Electric Vehicle Market Performance & Insights

Record actual outcomes after running each test. Do not mark a test passed unless verified.

ID	Test	Expected result	Actual result
TC-01	Open Flask site locally	Page loads without server error	To be recorded
TC-02	Load CSS	Styling is applied	To be recorded
TC-03	Open Tableau view directly	Published view loads	To be recorded
TC-04	Open embedded dashboard	Dashboard appears in the web page	To be recorded
TC-05	Change Manufacturer filter	Charts respond as configured	To be recorded
TC-06	Change Manufacturing Country filter	Country selection filters dashboard	To be recorded
TC-07	Navigate Story points	Selected story point displays	To be recorded
TC-08	Validate KPI calculations	Cards match worksheet calculations	To be recorded
TC-09	Inspect labels and axes	Titles and units are readable	To be recorded
TC-10	Open GitHub repository	Project files are accessible	To be recorded

Validation note

The dashboard displays 199,999 EV records while the training CSV contains 200,000 rows. Verify whether the KPI counts non-null Vehicle Id values or uses a distinct-count calculation before describing it as the total number of source rows.
